

I cannot even believe that the NAB would challenge the rights of paying satellite radio customers to receive local content especially when it is only traffic and weather. Satellite radio provides content that is simply not available anywhere else. If radio wants to get me to listen again, then they should improve the quality of programming, and find ways to improve the technology that is used to broadcast, instead of using the government to protect them. The last time I checked, we were living in America. Don't punish a company that has invested huge amounts of time, effort and money to provide a better product. I respectfully request that the FCC reject the NAB's petition 04-160 and support XM's ability to provide the kind of programming that I demand and deserve. Thank you.
